Multi-Family Residential Tapping Fees - For multi-family residential construction, the tapping fee shall be calculated based upon the number of proposed housing units times the applicable tapping fee components, regardless of actual number of meters.

Commercial Tapping Fees - For commercial customers, the tapping fee shall be calculated based upon an engineer's estimate of projected usage rates. The tapping fee shall be calculated by multiplying that usage rate times the applicable component(s). The total commercial tapping fee shall be at a minimum that which would have been charged to a residential customer. The Authority reserves the right at any time to compare the estimated usage to actual usage and to adjust the tapping fee accordingly.
