

**QUESTIONS/ANSWERS FOR**

**STORMWATER INSTALLATION**

**EAST OGLE STREET**  
**SOUTH JULIAN STREET**  
**WEST LLOYD STREET**

- Q. What depth will the basins be, in order that we can properly estimate costs for risers?
- A. Bidders should assume a depth of four (4') feet for each of the basins. If risers are necessary, price adjustments will be permitted during the project.
- Q. How will we be compensated for additional backfill required where the excavation exceeds five feet depth?
- A. The average excavation is assumed to be five feet. In some areas it may be less, and in some it may be more. If the required backfill for the overall project exceeds what would have been estimated for five feet, an adjustment will be allowed for the contractor.
